

利特能™智能风机盘管

Intelligent Fan Coil Unit

更环保、更舒适、更省电

Make your Air-conditioning System **Greener**,
more **Comfortable** and **SAVE** more

应用永磁马达为核心技术，配备智能程式温控器。
Featured with advanced Permanent Magnet Motor Technology and
Intelligent Programmable Thermostat.

利特能™ 智能风机盘管 Intelligent Fan Coil Unit (iFCU™)

永磁马达 Permanent Magnet Motor

利特能™采用专利技术及永磁马达，运转时自行产生磁通量，从而减少能耗，达到高效运行及节能效果。永磁马达无需传统马达的机械式碳刷，可减少噪音及废热产生，延长马达寿命。

配备变速驱动器，永磁马达的节能表现较传统定速交流马达更显著。

iFCU™ adopted the patented technology with rotor of a permanent magnet to generate magnetic flux. Its advantages are to eliminate the source of power loss and achieve a high energy efficient operation. By eliminating mechanical brushes, permanent magnet motor can also minimize the noise level and waste heat generation, thus improves motor lifespan.

With variable speed driver, the motor further enhances efficiency system compared to traditional fixed speed AC motor designs.

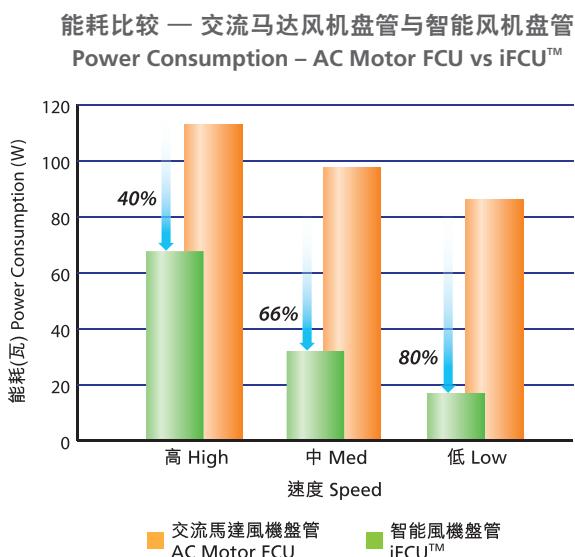

备注：1. 中国专利号 ZL 2011 2 0025375.5
2. 「永磁马达」也称为「直流无刷电动机」。

Notes : 1. China Patent No.: ZL 2011 2 0025375.5
2. "Permanent Magnet Motor" is called "Brushless DC Motor" in Mainland China.

节能表现 Energy Saving Performance

采用永磁电机变频调速控制，利特能™与传统交流马达风机盘管比较，在低速运作时可以减少达80%的能耗。

By adopting of permanent magnet motor with variable speed control, iFCU™ can reduce energy consumption by 80% at low speed operation compared to traditional AC fan coil unit.

备注 : 1. 此数据为静压 0 Pa 时测定的值。
2. 节能表现根据马达及风扇类型不同或有差异。

Notes : 1. The FCUs are tested at 0 Pa Static Pressure.
2. Saving Performance may be changed subject to the configuration of motor and blower.

产品特点 Product Features

智能程式温控器

Intelligent Programmable Thermostat

智能控制 | Intelligent Control

通过使用利特能™永磁电机和智能程式温控器，可根据室内温度变化或自定温度而自动调节风速，温度控制精度达 $\pm 0.5^{\circ}\text{C}$ ，因此利特能™可以节省70%的能量消耗。

利特能™配备“快速制冷模式”，永磁马达以较高速模式更快5%的速度运行，能在数分钟内达致预期的室温。

By using iFCU™ permanent magnet motor and intelligent programmable thermostat, its intelligent control can regulate the fan speed automatically according to the room temperature changes or customized temperature set point. The temperature control accuracy is up to $\pm 0.5^{\circ}\text{C}$. As a result, iFCU™ can save the energy consumption by 70%.

Featured with iFCU™ “Quick Cool Mode”, permanent magnet motor can increase 5% of high speed to reach the desirable room temperature within a few minutes.

Modbus 网络通讯温控器 | Modbus Network Thermostat

智能程式温控器系列Modbus网络通讯温控器提供Modbus/RTU(RS-485)通讯界面，与楼宇管理系统、楼宇设备自动化系统、中央监控系统进行沟通。

The IPT series Modbus Network Thermostat provides Modbus/RTU (RS-485) communication protocol interface for system integration. The IPT series can be controlled and monitored over RS-485 via Modbus/RTU by master controller or compatible to Building Management System (BMS), Building Automation System (BAS), Central Control and Monitoring System (CCMS).

自动控制模式节能效果更高

Unique Control Logic Achieves Real Energy Saving

运行温度

Operating Temperature

永磁马达在低速及高速运行时比一般交流马达，分别减少95%及58%热量产生。而所产生的废热会增加中央空调的负载，间接浪费用电。

PM Motor heat dissipation is reduced by 95% and 58% at low and high speed respectively compared with AC motor. The heat that generated will increase the cooling load of HVAC system, waste on the unnecessary use of energy.

- 寿命长 Long life time
- 减少马达运行时产生的热负荷 Further reduce the unexpected heat load from the fan coil motor to the system

马达运行时温升 Operating Temperature Rise of Motor

组件说明 Component Description

○ 结构紧密 Compact Structure

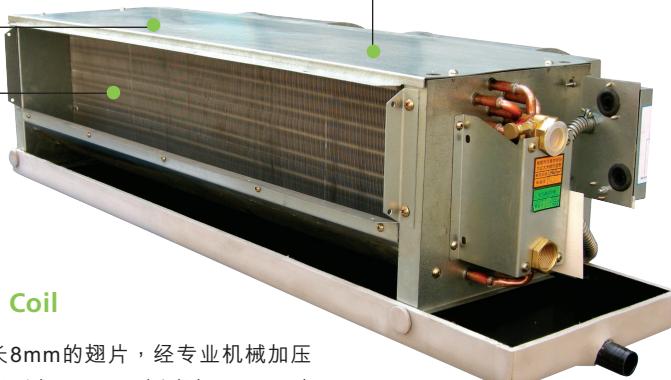

机组总高度控制在270mm内，方便安装于狭窄空间。

The total height is designed within 270 mm which is suitable for installation in confined spaces.

○ 材质优良 Fine Material

机组外壳采用优质镀锌钢板。

The casing is made of high quality galvanized steel.

○ 高品质盘管 High Grade Coil

采用铝箔冲制成坡高1mm，长8mm的翅片，经专业机械加压与优质钢管连接。所有盘管均通过25 bar压力测试及80bar破坏性压力测试。

Featured with slope height 1 mm, length 8 mm aluminum fins that mechanically bonded to copper tubes. All coils are tested under 25 bar and destructive pressure of 80 bar.

○ 超静音风扇 Ultra-quiet Fan

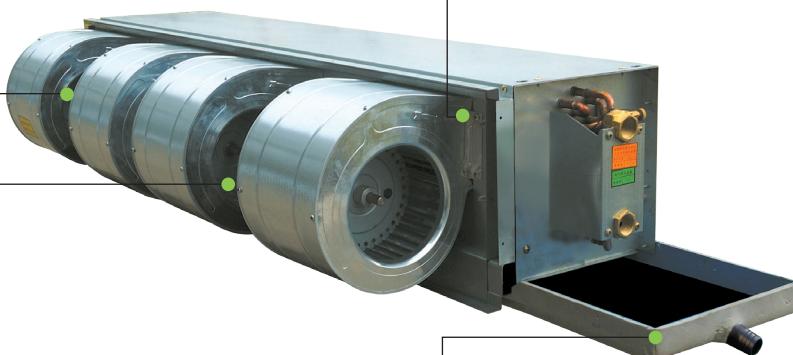

采用直径为160mm 的离心风扇，可低速运行。风扇均经过动平衡测试，风量足、噪音低、效率高。

Diameter 160mm centrifugal fan functions low speed operation. All fans have passed dynamic balance test and featured with large air flow, low noise level and high efficiency.

○ 保养简便 Easy Maintenance

经专业化设计，风扇和马达安装于同一后盖，只需松开4 – 6颗螺丝，即可拆卸整个动力组，简化清洁保养工作。

The fan and motor are mounted in the same back cover plate. For maintenance, only need unscrew 4 – 6 screws and dismantle the whole power part.

○ 永磁马达 Permanent Magnet Motor

永磁马达变速技术能根据用户的实际需要智能调节风速，减少负荷，降低噪音，达到最佳节能效果。运行时废热低，马达寿命长。

iFCU™ PM Motor utilizes variable-speed technology to optimize fan speeds for load requirement, maximizing energy efficiency and minimal noise level. Low waste heat generation improves motor lifecycle.

○ 冷凝水盘 Condensate Drain Pan

冷凝水盘为倾斜式自流水设计，在排水口设有储水槽，排水更顺畅。水盘内表面喷涂环氧树脂，外表面采用PE材料保温，有效防止腐蚀及水盘结雾。

The drain pan have a slight fall to the drain connection and flow enhanced feature at the outlet to ensure smooth condensate drainage. The interior is coated with epoxy resin and exterior insulated with PE material to prevent corrosion and condensation build-up.

备注 : 1. 制冷量是在DB=27°C, WB=19.5°C, TW1=7°C, ΔTW≤5°C下的值;
2. 制热量是在DB=21°C, TW1≤60°C下的值;
3. 风量、制冷量及制热量是在无过滤网, 机外静压为30 Pa时测定的值。

V1.2014

Notes: 1. Cooling: DB=27°C, WB=19.5°C, TW1=7°C, ΔTW≤5°C;
2. Heating: DB=21°C, TW1≤60°C;
3. The air flow, cooling capacity and heating capacity are tested under ESP 30 Pa and without filter.

备注：1. 以上表格内各型号机组的冷量依据水量来计算。
2. 以上表格内的风量为高档风速。
3. 进出水温差为10°C。

Notes: 1. The cooling capacity of above models are calculated according to water flow.
2. The wind flow is at high speed.
3. Inlet / outlet water temperature difference is 10°C.
